

Minimally Invasive Glaucoma Surgery (MIGS) Program

UC San Diego

About the Program

This program is designed to provide trainees with a comprehensive overview of the surgical management of glaucoma. Early exposure to the latest minimally invasive techniques will allow participants to improve their ophthalmological knowledge and accelerate the refinement of surgical skills. Fellows and residents will receive:

- 1) focused didactics that cover the science and clinical evidence behind each technique, patient-specific considerations and selection, and postoperative management/complications
- 2) practical, faculty-supervised hands-on experience to successfully perform each procedure and address intraoperative challenges.

Objectives

After completing the program, trainees will be prepared to:

- Approach the MIGS landscape with a better understanding of the surgical options
- Practice evidence-based medicine in the surgical management of glaucoma
- Make glaucoma treatment selections optimized for each patient
- Adopt surgical techniques to optimize results and minimize complications

Schedule

Didactics and practicals will be held on the Shiley Eye Institute campus on Wednesday evenings. Dinner will be provided. Follow the RSVP link to join.

Date	Time	Event	Location
July 30	5:30p	Iantrek	UCSD Center for Future Surgery
Aug 6	5:30p	Allergan	UCSD Center for Future Surgery
Aug 13	5:30p	Sight Sciences	UCSD Center for Future Surgery
Aug 20	5:30p	Alcon	UCSD Center for Future Surgery
Aug 27	5:30p	Glaukos	UCSD Center for Future Surgery
Sep 3	5:30p	New World Medical	UCSD Center for Future Surgery
Sep 10	5:30p	NOVA	UCSD Center for Future Surgery
